

The Integrated Power of Eclipsys PeakPractice

Eclipsys PeakPractice™, an integrated electronic health record/practice management (EMR/PM) solution, gives physicians an innovative, flexible and robust EMR/PM solution that can truly evolve their practices toward optimal performance. PeakPractice is a .NET-based EMR/PM suite that supports the complex workflows of a busy patient care environment with integrated functionality that meets the needs of today's physicians.

Improved Practice Productivity

- Single application promotes seamless workflow, including smooth check-in and check-out processes
- Providers and office staff alike can view, add, or edit appointments
- Integrated referral management allows the provider to initiate the referral with all the information housed within the program
- Surgery and procedure scheduling in a single solution
- Protocols including clinical and billing information for intelligent and efficient order placement that includes charges and diagnoses, consent forms, patient education, and when to return to the clinic
- Time tracking data for the entire visit (e.g. registration, appointment scheduling, check-in, room movement, check-out)
- Workflow routing processes deliver information to the correct user or role for financial and clinical information
- Common print functionality combines financial information (receipts, HIPAA consents) with clinical information (order requisitions, patient education, consent forms) in one integrated view for easy printing and review

Administrative Innovation

- Security permissions allow for control of which users or roles have access to specific information
 - Combined views across financial and clinical information provides powerful data analysis
- Single application log-in
- A single set of patient demographic data eliminates errors with interfaces or conflicting information
- Custom form feature allows for creation of clinical and financial information in PDF forms (worker's compensation and insurance dispute forms)
- Robust correspondence module enables letters to be sent to patients, employers, insurance companies, or other providers using a mixture of demographic, clinical, and financial information

Integrated Billing on a Single Database

- Billing information, including calculated E&M codes and automatically generated ICD and CPT codes relevant to the visit information, are automatically captured and scrubbed during the visit
- Claims that fail the automated pre-bill or visual inspection can be edited prior to sending to the clearinghouse (e.g. to add modifiers, etc)
- Real-time data provided across financial and clinical data
- A single report containing clinical, demographic and financial information can be created
- Correspondence regarding clinical and financial issues is consolidated in one location and can be sent in one letter if desired
- While entering charges or working rejected claims, users can access clinical information to ensure accuracy and quick resolutions to questions or errors
